Abstract (en)

[origin: EP1686555A1] A foil element comprises that a separating line (SL) (3) is partly bridged with a bridging layer (BL) (6) that consists of a substance applied in a free-flowing condition and subsequently strengthened, after hardening, the substance forms the BL through a drying, cross-linking physical/chemical process, and the BL limits movability of adjacent parts on the SL in relation to each other. An independent claim is also included for a method for producing a foil element.
