Abstract (en)

[origin: EP1686556A2] Apparatus is provided for displaying still images that appear animated to viewers in motion relative to those images. The apparatus includes a backboard, a plurality of images mounted on a backboard, and a slitboard mounted between the backboard and the viewer. As viewers pass by, the slitboard acts like a shutter creating an animation effect. Various backboard and slitboard side profiles, such as, for example, parallel and vertical, parallel and non-vertical, parallel and nonplanar, and nonparallel and nonplanar, can be used to facilitate installation of the apparatus in spatially-constrained environments.
