Abstract (en)
[origin: WO2005048703A1] A flying insect trap (2) is disclosed that is used in conjunction with a window, light coming through the window being used to attract the flying insects. The trap includes a panel (6a, 6b, 6n) and an adhesive substrate (8) with the panel positioned substantially at right angles to the window. The panel and substrate are arranged such that insects falling through the panel adhere to said substrate. The substrate is advanced, perhaps once per week, so that a fresh portion of adhesive substrate is available to trap said insects.
