Abstract (en)
[origin: WO2005049143A2] The invention relates to a device for transporting and rescuing people from danger areas, said device consisting of a heat-resistant film or canvas. The bag-like device (1) is formed by a central part (2) and overlapping lateral closing parts (3,4) arranged on both sides of the central part (2). A foot pocket (5) is formed by the longitudinal end region of the central part (2) of the canvas. The outer edges (6) of the central part (2) of the canvas are provided with strips (7) that can be connected by the lateral closing parts (3,4) overlapping in the closed state, by means of quick acting closures (8), and fix the person to be transported. The outer side of the foot pocket (5) and the outer side of the central part (2) of the canvas are coated with a fireproof, friction-resistant and tear-proof fabric (10). Carrying straps (9) are arranged on the outer edges (6) of the central part (2) of the canvas in order to transport a person in the rescue dragging bag (1). A felt backing (11) is provided inside the bag, for protecting the person from impacts during transport.
