Abstract (en)
[origin: WO2005046869A1] An exhaust system for a combustion engine comprises a deep-bed filter (16) for removing soot from the exhaust gas. The deep-bed filter (16) comprises a catalyst material (18) that promotes soot oxidation. The invention provides that an inner pore structure (28) of the deep-bed filter (16) is provided with a catalyst material (18) that is liquid beyond a temperature of no more than approximately 400 DEG C, preferably of no more than approximately 350 DEG C.
