Abstract (en)

[origin: US2008263759A1] The invention relates to a device for uncovering and/or covering the opening to a swimming pool covered by a roof, for low shelters consisting of adjacent roof elements oriented along the length of the swimming pool. The inventive device is characterised in that it comprises: storage means (600) that are located at an end of the pool and are used to store the roof elements (I) in a stacked manner; means for displacing said roof elements (I) horizontally (arrow H) over the length of the pool; stacking means (800) for stacking the roof elements (I) in the storage means (600); and means for interconnecting (900) the roof elements (I), said connecting means being both inseparable in order to secure the roof elements to each other, and separable in order to enable the vertical displacement (arrow V) of said roof elements (I) for stacking purposes.
