Abstract (en)

[origin: WO2005049519A2] The invention relates to a non-magnetic, ceramic one-component toner which is transferred onto a glass, glass ceramics or ceramics substrate or the like solid or flexible substrate by electrophotographic printing and burnt into in a subsequent temperature process. Said one-component toner comprises a synthetic matrix and a portion of substantially inorganic foreign matter. Said portion of foreign matter comprises exclusively non-magnetic particles and amounts to 40 to 70 % by weight, especially 50 to 60 % by weight, the specific charge of the toner particles being in a range of > 25 mu Ck/g.
