Abstract (en)

[origin: WO2005055093A2] A system and method for generating extensible file system metadata. In one embodiment, the system may include a storage device configured to store data and a file system configured to manage access to the storage device and to store file system content. The file system may be further configured to detect a file system content access event, and in response to detecting the file system content access event, to generate a metadata record, where the metadata record is stored in an extensible, self-describing data format.
