Abstract (en)
[origin: WO2005010788A1] The invention relates to a method for accessing to a packet-switched network financed by a service provider for electronic trade and payment and for running a telecommunication system based on a partnership prime principle. Said method provides a special service of an Internet access provider which allows the clients to use free-of-charge any communication service with traders, vendors and service providers. The turnovers obtained in the electronic trade transactions are automatically rewarded by bonuses in the form of electronic telecommunication services which are usable in the network.
