Abstract (en)
[origin: WO2005053290A1] The invention relates to a security module (SM) for encrypting a telephone conversation between one or several first telecommunication terminals (VoIP-C) in a packet oriented data network (IP-LAN) and telecommunication terminals (TDM-C) in an analog and/or digital telephone network (TDM). Said module enables the use of protocols (MIKEY; SRTP) from the LAN network to the TDM network in order to carry out an end-to-end encryption.
