Abstract (en)
A cigarette (50) comprises a tobacco rod (52) in axial alignment with a ventilation tube (10) having an air permeable wall (12). Filter material (58,60) is provided in the central passage of the tube. The annular rod end wall of the tube is air permeable to provide a ventilation surface (20) through which, when the cigarette is smoked, air is drawn into the tube wall and then into the filter material through the air permeable inner wall of the tube; where it mixes with mainstream smoke from the burning tobacco rod.
