Abstract (en)
The structure of didactic support for children includes a table unit and a board unit fixed in vertical position on the table unit; the board unit includes a board plate with a horizontal upper edge and two lateral vertical edges, two vertical rods extending along the lateral edges of the board plate and fixed thereto, a crossbar extended along the upper edge of the board plate and fixed thereon and to the vertical rods; the structure of didactic support includes also fixing means of the board unit to the table unit, and is characterized in that these fixing means include two brackets each one of which is constrained to a respective one of the vertical rods and to the table unit, every bracket having a lower side of support on the table unit with enough extension that stops substantially any flexion of the vertical rods and thus of the board unit with respect to the table unit. Preferably all the above mentioned elements are made of cardboard, or string if necessary. The two brackets allow - in a very simple and effective way - to maintain the board plate in vertical position on the table unit, so that one side thereof can be used by one or more children, while other children can use the opposite side.
