Abstract (en)

The clamp device has two chuck jaws (14, 16) by which a first is attached at a base (12) and a second attached at a carriage (30). The jaws are adjustably stored along a top side (18) of the base by a screw jack (40) having a spindle recess (20). The recess is arranged between the jaws and adjustable over an entire moving position of the jaws with a cover element (32) provided. The base lies in a U-shaped cross section with two sides (22), whose top sides are arranged at front surfaces (24) and border concisely on the cover element. The cover element is a one piece plate at the carriage.
