Abstract (en)

The device has a jamb (4) terminated at an end by a retention hook (5) of lower edge of a slate board (1) and another end by a fixation unit (6) of a support. The fixation unit is connected to jamb (4) by an anti bent section (12). The section has a bend (13) positioned more close to the fixation unit and situated in a plane of a support point of the retention hook on the underlying slate board.
