Abstract (en)

[origin: FR2863152A1] The method involves disposing a mesh-spring bed frame (110) of a bed (100) in a sleeping arrangement position, in a horizontal plane raised with respect to ground, to release a housing. The housing receives furnishing and/or work installing units (300) before providing the bed into a room. The bed is retracted by vertical movement of the frame towards a storage position situated in plane parallel to that of the sleeping position. An independent claim is also included for a device for implementing a bed retracting method.
