Abstract (en)
[origin: WO2005051155A1] The present invention relates to a vacuum cleaner comprising at least one dust collector and at least one fan motor, said collector being arranged inside a dust compartment and comprising means for collecting particles brought into said collector by an air stream generated by said fan motor. Said air stream is flowing into said cleaner substantially through a cleaner inlet and flowing out from said cleaner substantially through a cleaner outlet (43), whereby said stream during its flow through said cleaner is guided through a path connecting said cleaner inlet with said cleaner outlet (43), at least one first inner outlet (25) and one second inner outlet (33) being arranged in said path. Said vacuum cleaner further comprises a first filter (13), removably arranged at said first inner outlet (25), and a second filter (14), substantially permanently arranged at said second inner outlet (33).
