Abstract (en)

[origin: FR2863862A1] The device has a tightening-loosening unit composed of a belt (25) in deformable and elastic material. A part of the unit has a section to engage in an annular groove. The section is provided in the upper part of a dental instrument (5) to maintain the instrument by tightening forces. The unit has a force exerting part to exert loosening forces for canceling the tightening forces in order to release the instrument.
