Abstract (en)

[origin: WO2005054551A1] The invention relates to a method and device for order management in a production process for a fibrous product, whereby at least one intermediate product is prepared and processed to form the fibrous product; the processing steps are performed by machines and the production process is monitored and controlled. The aim of said invention is to manage and monitor a production order on which the production process is based. Said aim is achieved, whereby a comparison between set values, predetermined by the production order, and the actual state of the production process is carried out. The deviation from the set values, thus determined, is displayed.
