Abstract (en)

[origin: FR2860815A1] The device has a support lever (6) with a lower support surface (18) and an upper support surface (16) comprising a longitudinal opening (17). The lever is arranged on an upper flange (13) of a transversal beam (4) by longitudinal rib (11) of an upper central band (8) of a profiled panel (2) of a shuttering panel such that the rib cooperates with the opening edges. The lever is maintained in position on the beam by a bolt (20).
