Abstract (en)

[origin: FR2863070A1] The method involves generating physical interactions with active zones (10) on an interface object (5), where each zone is associated with preset information. The zones are defined for a predetermined time and are deactivated at the end of the time. The zones are automatically redefined depending on initial interactions detected on surface (9) of the object, when interactions with the object are detected while the zones are deactivated. An independent claim is also included for a user interface device adapted to implement a user-interface method.
