Abstract (en)

[origin: FR2860903A1] The dispenser has a stepper motor (20) for driving rollers (17, 18) to move a strip (10) towards a theoretical cutting position and then to a correct cutting position. Storing units (14, 15) store length and characteristic pattern of an individual ticket, respectively. A sensor (35) detects unwinding of the pattern when the strip moves towards the theoretical position, to position perforation lines (11) opposite to a cutting unit (22). An independent claim is also included for an interactive gaming machine having a ticket dispenser.
