Abstract (en)

[origin: WO2005052908A1] The invention relates to a display device comprising a memory for storing a starting image and/or idle-state image and comprising a signal input for transferring data to the display device, whereby an input device is provided for storing a new starting and/or idle state image. The data of the new starting image and/or idle-state image is preferably fed to the display device via the signal input of the display device.
