Abstract (en)

[origin: WO2005062327A1] The invention relates to a switchgear for the medium-voltage range and the high-voltage range, comprising power switches and/or load interrupter switches, according to patent claim 1. The aim of the invention is to better ensure the inverse ignition freedom and to achieve the effective division of the voltage in the switching process. To this end, two switches (1) are mounted in series on each phase, which can be controlled in such a way that they are co-ordinated with each other in a small window of time (dt).
