Abstract (en)
[origin: EP1691000A1] Tilting-swinging window comprises a connecting rod fitting (4) having a first closure for locking the leaf (2) in a tilting position in the tilting frame (3) and a second closure (10) for locking the leaf in the closed position directly in the frame (1). A handle rotates about an angled region in the leaf and is coupled with two connecting rods via a drive operating in the opposing direction. The connecting rods are coupled with the first and second closures. Preferred Features: The second closure has a pivoting bolt which is operated by the connecting rods. The tilting frame encompasses the leaf in a U-shaped manner on the side facing away from the handle.
