Abstract (en)

The laying system for the construction of a wall, floor or ceiling covering (1) has covering elements (2) and fastening elements (3) for the fixing of the covering elements on a substructure. The covering elements on their underside have housing elements in which the fastening elements engage with positive locking. The housing elements extend in the direction of the longitudinal axes of the covering elements. At least two continuous housing elements with a space in between them are provided on each covering element. An independent claim is included for a base component for the construction of a wall, floor or ceiling covering and which is connected to a substructure.
