Abstract (en)

A heating device comprises a tubular body (4) interposed between a first end element (2) and a second end element (3) so as to define a chamber (5) suitable for receiving a fluid to be heated, said first end element (2) being fixed to said second end element (3) by removable fixing means (22) that extends between a central zone (10) of said first end element (2) and a further central zone (20) of said second end element (3).
