Abstract (en)

[origin: WO2005051141A1] The invention relates to a viewing device comprising a housing (2, 26) that comprises a front wall (3; 3'; 21; 29) having at least one viewing opening (8, 8', 23, 28) for an object (10, 16, 24) to be viewed, which can be placed or shown inside the housing (2; 26) on the inner surface (9, 9', 34, 51) on the rear wall (4, 4', 22, 32, 33), and comprises a blank (25) for producing a viewing device of this type. In order to achieve that the flat objects (10, 16, 24) to be viewed, which are depicted in the inventive viewing device (1, 1', 20, 27), give a three-dimensional impression, the invention provides that the outer surface (100) of the front wall (3, 3', 21, 29) of the housing (2, 26) of the viewing device (1, 1', 20, 27) is shaped so that it is convex in relation to the viewer (7). The three-dimensional impression of the object (10, 16, 24) to be shown can be further enhanced when the rear wall (4, 32, 33) of the housing (2, 26) of the viewing device (1, 1', 27) has an inner surface (9, 9', 34, 51) concave in relation to the viewer (7).
