Abstract (en)  
[origin: WO2005056062A1] The invention relates to scent composites comprising at least one perfume oil and at least one additive having a melting or flow point of 20 DEG C -100 DEG C. Said composites are highly viscous or solid at temperatures of up to 18 DEG and are converted into a liquid melt state, substantially without decomposition, at temperatures of not more than 110 DEG C. The invention also relates to a method for the solidification of perfume oils and to a method for long-lasting perfuming of the surfaces of substrates. The invention further relates to the use of said scent composites and detergents, cleaning and textile post-treatment agents containing said scent composites.
