Abstract (en)

[origin: WO2005061031A1] The invention relates to a method for determining a position in order to carry out substance discharge. At least one piece of reference information or a reference point (A, B) is provided, a position based on the piece of reference information or in relation to the provided reference point for carrying out substance discharge output of a substance is determined and the determined position is outputted. The invention also relates to a device which is used to determine a position for substance discharge, said device comprising a memory which stores reference information or patient-specific parameters, a computer which determines a position based on the data memorised in the storage unit, and an output unit which is used to output the determined position.
