Abstract (en)

[origin: CH694645A5] The device is suitable for electrostatic separation of particles in a gas flow, usable in flue gas cleaning in small heating systems. It can be installed in a flue gas pipe (1) and has a cover (5), which can be fitted in a gastight manner and conductively on a corresponding aperture of the flue gas pipe, so that in its center an electrode wire (4) via an insulator (3) is free-suspendedly fixed with at least its one end. A high voltage producer with rectifier function forms direct voltage between the electrode and the flue gas channel. The electrode towards each freely suspended end narrows, it can be actively electrically stabilised or passively so.
