Abstract (en)

[origin: WO2005056427A1] The invention relates to a supply container comprising a receiving container (2) which is sealed by a sealing cap (1). The sealing cap (1) seals at least two openings respectively formed by an end (4) on the multipart receiving container and is connected to the receiving container (2) in a sealed state in a friction-tight and/or positive locking fit. The invention is characterized in that a sealing area is provided, in relation to each opening (5) on the sealing cap (1) and in a sealed state the respective sealing area (6) rests on the edge (4) of the corresponding opening (5) in an edgeless, sealing manner. According to the invention, the sealing cap (1) assumes a precisely determined sealing position in a sealed state on the receiving container, wherein the sealing areas (6) rest on the edges (4) and a small axial pressing force is exerted.
