Abstract (en)
[origin: WO2005049450A1] The invention relates to a packing consisting of a sleeve (1) provided with a cavity, and a cap (8) that can be connected to the sleeve. A container (3), especially consisting of plastic or glass, is arranged in the cavity of the sleeve, preferably for receiving liquid and/or viscous substances dispensed by a dispensing device. The aim of the invention is to improve one such packing for a plastic or glass container for receiving liquid and/or viscous substances dispensed by a dispensing device, in such a way that the packing is high-quality and flexible for a plurality of different containers. To this end, the container (3) can be fixed in a receiving element in the region of the end of the sleeve (1) opposing the cap (8) in a positive or non-positive manner.
