Abstract (en)
[origin: WO2005052276A1] An eave lining system for buildings including an eave lining sheet (1) pre-finished on at least one exposed surface and securing means for affixing the eave sheet to a support surface (6), wherein the eave sheet and securing means are configured such that minimal post installation finishing is required. In a preferred form, the system includes a pre-finished corner trim system for concealing and finishing the joint between the eave lining sheet and the adjacent building surface. In one form the trim system is a two-part system comprising an inner core element that is secured to the eave support structure or adjacent building surface, and an outer pre-finished clip on cover element. Preferably, the cover element comprises standard straight length sections and custom pre-formed corner pieces that sit over the ends of the straight sections.
