Abstract (en)  
[origin: WO2005050105A1] This invention concerns a Stirling Cycle type cooling device (1) where a heat exchanger (7) is used to ensure the heat transfer between the cold surface (5) of the Stirling cooler (2) and the internal medium to be cooled on the one hand, and the hot surface (6) of the Stirling cooler (2) and the outer medium where the thermal energy is rejected on the other hand, without using any additional fan systems.
