Abstract (en)

[origin: FR2863426A1] The method involves receiving a message created by an initiator client of a collaboration session through an electronic mail related to a collaboration session manager (125). The message has addresses of the clients, and an identifier of the collaboration session activated by the collaboration session manager is obtained. A message having the identifier is transferred to a destination of each address of the clients to establish the session. Independent claims are also included for the following: (A) a system for establishing collaboration session between clients of collaboration session across the communication network (B) a computer program stored on an information medium to implement the collaboration session establishing method.
