Abstract (en)

[origin: WO2005021376A2] An internal environment control system for an outdoor enclosure system is described that includes: a) at least one air intake component coupled to the outdoor enclosure system, b) at least one air exhaust component coupled to the outdoor enclosure system, c) an environmental detection device, and d) an environmental regulation device coupled to the environmental detection device, the at least one air intake component, the at least one air exhaust component or a combination thereof, wherein the regulation device activates at least one of the at least one air intake component or the at least one air exhaust component. Methods of controlling the internal environment of a remote enclosure system are also described herein that include: providing an internal environment control system; providing ambient air; and directing the ambient air through the internal environment control system.
