Abstract (en)

The device has a horizontal profile rail (1) with a longitudinal running surface for at least one roller arrangement (15) with at least one running roller on which panel (4) with attachments, preferably goods supports, can run on at least one roller holder. The running surface is a recess bounded on one side by a cantilever protrusion with a reverse cut expanding the running surface and a second panel (5) on a support on the widened running surface along which the support can be moved.
