Abstract (en)

[origin: EP1692990A2] The bag has an air-permeable bag (10), at which an inlet port (19) is provided with a connecting piece (1). The inlet port is formed by a circulating seal (12). The seal stands out so that a sealing rim can be placed onto the bag and fits at the connecting pieces. The seal is a stand out ring into the bag. An independent claim is included for a method for the manufacture of a suction cleaner filtering bag.
