Abstract (en)
A dust collector (200) of a vacuum cleaner is disclosed. The dust collector includes a dust collecting container (210) adapted to separate contaminants from air introduced into the dust collecting container (210), and to collect the separated contaminants. The dust collecting container includes an air discharging part (214b,215b) arranged at a top portion of the dust collecting container (210), a container cover (220) mounted to the top portion of the dust collecting container (210), and adapted to open or close the dust collecting container (210). The dust collector also includes a top cover (230) separably coupled with the container cover (220), and a filter (237) arranged between the container cover (220) and the top cover (230), and adapted to filter air discharged from the air discharging part (214b,215b), thereby separating contaminants entrained in the discharged air.
