Abstract (en)
The gliding board has a side cut (2) that widens from the middle area (3) of the board towards one of its ends, to a point of maximum width (4) of the board. The board has a reinforcing fiber mat (10) comprising yarns (11) that extend in the longitudinal direction of the board. The number of yarns per unit of length, measured across the board, varies from the middle area towards the point of maximum width of the board, and reaches its maximum value in the vicinity of areas where bindings are mounted.
