Abstract (en)  
[origin: EP1693306A1] The container has compartments (20, 22) delimited between a base (10B) and a membrane (14) and between an opening (10C) and the membrane, respectively, where the membrane is fixed to a lateral wall (10A). The compartment (20) has a zone with a part reducing a volume of the compartment (20), when the part is deformed by a pressure, for generating an excessive pressure in the compartment (20) in order to subject the membrane to a stress.
