Abstract (en)

The cap has a pallet (3) extending along the outer circumference of a tubular skirt (6). The pallet is configured to permit sampling of a product contained in a container by partially introducing the pallet in an opening (4) when the cap is detached from the container. A junction is provided between the circumference and an inner side of the pallet. An edge of the skirt is defined in a rounded free end of the pallet. Independent claims are also included for the following: (1) a cosmetic product packaging device (2) a method for performing a patch test for assuring the innocuousness of a product to be applied on keratinous materials e.g. skin or hair.
