Abstract (en)

[origin: EP1693323A1] The method involves activating a feedback position control of a jockey roller during a reel change. A reference value of a speed controller (22) is entered for generating a reference value of current regulation of an output variable of the controller. The control is activated after the reel change, and a differentiated actual value of the control is entered for generating a reference value of the regulation as pre-control component. An independent claim is also included for a reel changer of a rotary printing machine.
