Abstract (en)

[origin: EP1693511A1] Machine for producing or processing a web of material, comprising a treatment section in which the web is treated with a fluid, where the treatment section is connected to a fluid source via pipework, comprises an elastically deformable compensating material that is located in a fluid receptacle of the fluid source or the treatment section or in a damping device attached to or in the pipework and/or delimits such a fluid receptacle and/or (co)defines an effective cross-section in the pipework. An independent claim is also included for a damping device for mounting in or attachment to pipework between a fluid source and a device to be supplied with fluid, comprising an elastically deformable compensating material that is mounted in and/or delimits a fluid receptacle of the damping device.
