Abstract (en)

[origin: EP1693719A1] The device has a panel (4) connected to a watch through a connection and defining a housing (6) for a bracelet (3). A lever (8) is mounted movable in rotation around an axle. A control device (14) actuates the lever to move from a stable closing position in which it maintains the panel closed, to an opening position in which the panel is liberated and allows accessing the housing. Independent claims are also included for the following: (1) a watch including a bracelet fixing device (2) a bracelet including a bar fixed to an end for cooperating with a fixing device.
