Abstract (en)
   [origin: US2005107743A1] An infusion set comprises a base member, an introducer cap, and an infusion cap. The base member preferably
   comprises a soft cannula extending from a lower side of the base member, and a port on an upper side thereof. The port is configured to be in
   fluid communication with the cannula. The port also comprises a septum adapted to seal the port against unwanted fluid flow. The introducer cap
   is adapted to be mounted to the base member and has a needle adapted to extend through the septum and said soft cannula in an assembled
   position. The infusion cap comprises a lumen adapted to receive an elongate flexible tube. The infusion cap also comprises a hard cannula adapted
   to be inserted through the septum and to place said soft cannula in fluid communication with said lumen.
