Abstract (en)

[origin: WO2005056996A1] The invention relates to a method and device for operating a drive unit (1), particularly of a vehicle, which enables a more convenient conversion of a rotational speed specification. To this end, a set value is provided for at least one output quantity of the drive unit (1). In at least one operating state of the drive unit (1), a set value is provided for an operating quantity of the drive unit (1). In this operating mode, the at least one output quantity of the drive unit (1), despite its set value, is predetermined for the operating quantity in order to bring an actual value for the operating quantity closer to the set value.
