Abstract (en)
[origin: WO2005059355A1] The invention relates to an ignition coil of an ignition system of a combustion engine, comprising a housing (12), a magnetically active core (14, 28), a first coil winding (18), which is connected to a supply voltage, and a second coil winding (24) that is connected to a high-voltage connection. According to the invention, at least one electrically conductive component (28) is provided, at least in areas, with a means (31) for the electrically effective leveling of its surface.
