Abstract (en)
An object of the present invention is to perform excellent crushing on an SRC object to be crushed or RC object to be crushed (pillar, beam or the like). In the crushing machine of the present invention, a crushing machine outer case is provided with movable jaw main bodies, base portions of the movable jaw main bodies are provided at the pivotally supporting portions that are separated from each other by a predetermined space, crushing bodies are fixed to the pointy ends of the movable jaw main bodies, the movable jaw main bodies being configured so as to be able to perform opening and closing movement by means of hydraulic cylinders, and crushing blade lines of the crushing bodies are formed so as to follow the longitudinal direction of the movable jaw main bodies.
