Abstract (en)
[origin: EP1695828A1] An ink jet recorder of the present invention provides an apparatus in which an ink drip from a nozzle plate is prevented, deterioration of image quality is suppressed, and damage to the nozzle plate is prevented. An ink jet recorder for performing recording by an ink jet head on a medium to be recorded is constructed by including a hydrophilic nozzle plate 4, an ink absorber 5 which absorbs ink, an absorber holding board 6, pressurizing means for supplying ink to the ink jet head, and a cap 9 which sucks ink in the ink absorber. Thus, ink is prevented from staying in the vicinity of nozzles, and the nozzle plate is prevented from being directly damaged, so it is possible to provide an ink jet recorder in which deterioration of image quality is prevented.
